**The Adolescent Brain: Insights from Neuroscience**

**Wednesday, September 27th**

## **4:00 PM**

### **Via Zoom**

**Abstract:** In recent years there has been an explosion of research on the adolescent brain. Through these studies we have learned how normative changes in the brain during this window of development support developmental needs and the transition into adulthood. This talk will focus on neurodevelopment of brain systems that support learning, motivation, risk-taking and reward seeking and how environmental inputs shape that development. A closing discussion will include highlights from ways in which adolescent neuroscience research can inform policy to support this important developmental period.
