NEUROSCIENCE SPEAKER SERIES

Dr. Brian Dias

**Developmental Neuroscience & Neurogenetics
Program
The Saban Research Institute**

University of Southern California

Lifespan Perspectives on Legacies of Stress

**Thursday, September 24
4:00 PM**

**Burns Lecture Hall
Department of Natural Science Nucleus**

Abstract: Historical events have generated data indicating that stressors experienced by populations affect not only the individuals directly exposed to them, but also descendants. My talk will shed light on the nature and mechanisms by which legacies of (pre-conceptual, *in utero* and post-natal) stress perpetuate across generations, and how we may begin to break them.
